PrepNova API Test Report

Local API and PostgreSQL verification | 29 October 2026

API base: http://localhost:5000/api

Summary

The API server and PostgreSQL connection were available. 56 checks passed and one operation was intentionally skipped. All 40 declared API routes were inventoried; 39 were exercised and the leaderboard reset route was reviewed but not invoked. Temporary test accounts and records were removed after the run.

Interview completion returned an AI sourced evaluation with five question evaluations and no provider error. Audio transcription was checked for invalid request handling only; no real audio was sent to its external provider.

Results by area

Health: GET /health returned HTTP 200.

Authentication: registration, login, current user, duplicate registration, invalid credentials, and missing token behaved as expected (201, 200, 409, 401).

Profile and Story Vault: profile read/update and story list/create/update/delete passed (200/201).

Question pool, dashboard, and leaderboard: authenticated reads passed (200).

Notifications: list, mark one read, and mark all read passed (200).

Support: user create/list/read/reply and admin list/read/reply/close passed (200/201).

Admin: dashboard, account and question reads, temporary admin creation/deletion, disposable question creation passed (200/201).

Interview lifecycle: create, read, save answers, complete, results, and retry passed (200/201).

Interview integrity: three tab-switch strikes suspended the disposable interview; history read passed.

AI evaluation: completion returned source=ai, five question evaluations, and no provider error.

Speech transcription: malformed audio payload was rejected with HTTP 400; provider transcription was not invoked.

Route inventory

Health and authentication: GET /health; POST /auth/register; POST /auth/login; GET /auth/me.

Users: GET/PUT /users/profile; GET/POST /users/stories; PUT/DELETE /users/stories/:id.

Question and dashboard: GET /questions/pool; GET /dashboard/stats; GET /dashboard/leaderboard.

Notifications: GET /notifications; POST /notifications/read-all; POST /notifications/:id/read.

Support: GET/POST /support/tickets; GET /support/tickets/:id; POST /support/tickets/:id/messages.

Interviews: GET /interviews/history; POST /interviews; POST /interviews/transcribe; GET /interviews/:id; POST /interviews/:id/tab-switch; POST /interviews/:id/answers; POST /interviews/:id/complete; GET /interviews/:id/results; POST /interviews/:id/retry.

Admin: GET /admin/dashboard; POST /admin/leaderboard/reset; GET /admin/support/tickets; GET /admin/support/tickets/:id; POST /admin/support/tickets/:id/messages; POST /admin/support/tickets/:id/close; GET /admin/accounts; DELETE /admin/accounts/:id; GET/POST /admin/questions; POST /admin/admins.

Skipped operation and limits

POST /admin/leaderboard/reset was not executed because it changes shared global application state. Its route and admin authorization were reviewed in source.

Speech transcription was tested only for request validation. Live audio recognition and provider availability were not tested. These results describe this local run and do not certify production hosting, load capacity, or browser microphone permissions.
